5.20.2 Constructor & Destructor Documentation	26
5.20.2.1 __init__	26

Chapter 1

Project D.R.A.M.A. Filter

1.1 Introduction

This module aims to ...

1.2 Installation

To install this module, just download the last version, unpack it and import [drama_filter](#) package on your Python interpreter:

```
import drama\_filter as df  
df.main()
```

Chapter 2

Namespace Index

2.1 Namespace List

Here is a list of all documented namespaces with brief descriptions:

drama_filter (Main module)	9
---	---

Chapter 3

Class Index

3.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

drama_filter::code::Action (Represents a Action)	11
drama_filter::code::ADA (Represents the ADA agent)	12
drama_filter::code::Agent (Abstract class that represents Story Agents)	14
drama_filter::code::Belief (Represents a Emotion)	14
drama_filter::code::Description (Represents the Story)	15
drama_filter::code::Desire (Represents a Emotion)	16
drama_filter::code::DesireState (Represents a Desire State)	16
drama_filter::code::Emotion (Represents a Emotion)	17
drama_filter::code::EmotionalState (Represents a Emotional State)	18
drama_filter::code::Environment (Represents the Story Environment)	19
drama_filter::code::Event (Abstract class that represents Story Events)	19
drama_filter::code::Intention (Represents a Intention)	20
drama_filter::code::IntentionState (Represents a Intention State)	21
drama_filter::code::Message (Represents the Message)	21
drama_filter::code::Object (Abstract class that represents Story Objects)	22
drama_filter::code::Personality (Represents the Script)	22
drama_filter::code::Plan (Represents a Plan)	23
drama_filter::code::Script (Represents the Script)	24
drama_filter::code::Script_interpretation (Represents the Script Interpretation)	25
drama_filter::code::Story (Represents the Story)	26

Chapter 4

Namespace Documentation

4.1 `drama_filter` Namespace Reference

Main module.

Variables

- string `__author__` = 'Gabriela Salvador Thumé <gabithume@gmail.com>'
- string `__copyright__` = 'Copyright (c) 2012 Gabriela Salvador Thumé'
- string `__license__` = 'GPLv3'
- string `__version__` = '0.1'

4.1.1 Detailed Description

Main module.

Chapter 5

Class Documentation

5.1 `drama_filter::code::Action` Class Reference

Represents a [Action](#).

Public Member Functions

- `def __init__`
Constructor for [Environment](#).

Public Attributes

- **label**
- **precondition**
- **effect**

5.1.1 Detailed Description

Represents a [Action](#).

5.1.2 Constructor & Destructor Documentation

5.1.2.1 `def drama_filter::code::Action::__init__(self, label = None, actions = None)`

Constructor for [Environment](#).

Parameters

<i>label</i>	A string of label
<i>precondition</i>	A string of preconditions
<i>effect</i>	A string of effects

The documentation for this class was generated from the following file:

- code.py

5.2 drama_filter::code::ADA Class Reference

Represents tha [ADA](#) agent.

Public Member Functions

- def [__init__](#)
Constructor for [Environment](#).
- def [sensorial_brf](#)
Procedure that.
- def **msg_brf**
- def **story_brf**
- def [input_brf](#)
This procedure defines what are the beliefs based on the new beliefs, the old ones, the emotions and intentions In this simulation, the values were set manually.
- def **reactive_euf**
- def [cognitive_euf](#)
Cognitive emotions act like the second choice of emotions.
- def **Filter**
- def **planning**
- def **decision_making**

Public Attributes

- [emotions](#)
The script interpretation analyzes the story in terms of messages, characteristic of the story and the description of character.
- [beliefs](#)
Beliefs of the Perception from input_brf.
- **desires**
- [intentions](#)
Intentions.
- **actions**
- **story**
- **story_frame**
- **story_frameTotal**
- **personality**
- [plans](#)
The beliefs will be updated, according to cognitives emotions.
- **name**

5.2.1 Detailed Description

Represents the [ADA](#) agent.

5.2.2 Constructor & Destructor Documentation

5.2.2.1 `def drama_filter::code::ADA::__init__(self, personality = {}, emotions = {}, beliefs = {}, desires = {}, intentions = {}, actions = {})`

Constructor for [Environment](#).

Parameters

<i>personality</i>	A string of personality
<i>emotions</i>	A Emotional State
<i>beliefs</i>	A list of Beliefs
<i>desires</i>	A Desire State
<i>intentions</i>	A Intention State
<i>actions</i>	A list of actions

5.2.3 Member Function Documentation

5.2.3.1 `def drama_filter::code::ADA::cognitive_euf (self, emotions, beliefs, intentions)`

Cognitive emotions act like the second choice of emotions.

In this simulation, are equal to the reactivities

5.2.4 Member Data Documentation

5.2.4.1 drama_filter::code::ADA::emotions

The script interpretation analyzes the story in terms of messages, characteristic of the story and the description of character.

Cognitive Emotions.

The script perception of environment analyzes the whole story in terms of events, objects and agents The script perception is divided in two modules: environment and interpretation New beliefs are generated by the script perception: Reactives Emotions are generated by reactive_euf

If cognitives emotions are different of reactivities The emotions will be the cognitives

5.2.4.2 drama_filter::code::ADA::plans

The beliefs will be updated, according to cognitives emotions.

Update the intentions

The documentation for this class was generated from the following file:

- `code.py`

5.3 `drama_filter::code::Agent` Class Reference

Abstract class that represents [Story](#) Agents.

5.3.1 Detailed Description

Abstract class that represents [Story](#) Agents.

The documentation for this class was generated from the following file:

- `code.py`

5.4 `drama_filter::code::Belief` Class Reference

Represents a [Emotion](#).

Public Member Functions

- `def __init__`
Constructor for [Environment](#).

Public Attributes

- `label`
- `typeof`
- `predicate`
- `weight`

5.4.1 Detailed Description

Represents a [Emotion](#).

5.4.2 Constructor & Destructor Documentation

5.4.2.1 `def drama_filter::code::Belief::__init__(self, label=None, typeof=None, predicate=None, weight=None)`

Constructor for [Environment](#).

Parameters

<i>label</i>	A string of label
<i>typeof</i>	A string for type
<i>predicate</i>	A string for predicate
<i>weight</i>	A value for weight

The documentation for this class was generated from the following file:

- `code.py`

5.5 `drama_filter::code::Description` Class Reference

Represents the [Story](#).

Public Member Functions

- `def __init__`
Constructor for [Story](#).

Public Attributes

- **`character_description`**

5.5.1 Detailed Description

Represents the [Story](#).

5.5.2 Constructor & Destructor Documentation

5.5.2.1 `def drama_filter::code::Description::__init__(self, character_description = None)`

Constructor for [Story](#).

Parameters

<i>character_ - content</i>	A list of character content
---------------------------------	-----------------------------

The documentation for this class was generated from the following file:

- `code.py`

5.6 drama_filter::code::Desire Class Reference

Represents a [Emotion](#).

Public Member Functions

- [def __init__](#)
Constructor for [Environment](#).

Public Attributes

- **label**
- **intensity**

5.6.1 Detailed Description

Represents a [Emotion](#).

5.6.2 Constructor & Destructor Documentation

5.6.2.1 `def drama_filter::code::Desire::__init__(self, label = None, intensity = None)`

Constructor for [Environment](#).

Parameters

<i>label</i>	A string of label
<i>intensity</i>	A value for intensity

The documentation for this class was generated from the following file:

- code.py

5.7 drama_filter::code::DesireState Class Reference

Represents a [Desire](#) State.

Public Member Functions

- [def __init__](#)
Constructor for [Environment](#).

Public Attributes

- **desires**

5.7.1 Detailed Description

Represents a [Desire](#) State.

5.7.2 Constructor & Destructor Documentation

5.7.2.1 `def drama_filter::code::DesireState::__init__(self, label = None, intensity = None)`

Constructor for [Environment](#).

Parameters

<i>desires</i>	A list of possible desires is instanciated
----------------	--

The documentation for this class was generated from the following file:

- code.py

5.8 drama_filter::code::Emotion Class Reference

Represents a [Emotion](#).

Public Member Functions

- `def __init__`
Constructor for [Environment](#).

Public Attributes

- **label**
- **intensity**
- **valence**

5.8.1 Detailed Description

Represents a [Emotion](#).

5.8.2 Constructor & Destructor Documentation

5.8.2.1 `def drama_filter::code::Emotion::__init__(self, label = None, intensity = None, valence = None)`

Constructor for [Environment](#).

Parameters

<i>label</i>	A string of label
<i>intensity</i>	A value for intensity
<i>valence</i>	A value for valence

The documentation for this class was generated from the following file:

- code.py

5.9 drama_filter::code::EmotionalState Class Reference

Represents a Emotional State.

Public Member Functions

- `def __init__`
Constructor for [Environment](#).

Public Attributes

- **emotions**

5.9.1 Detailed Description

Represents a Emotional State.

5.9.2 Constructor & Destructor Documentation

5.9.2.1 `def drama_filter::code::EmotionalState::__init__(self, emotions = None)`

Constructor for [Environment](#).

Parameters

<i>emotions</i>	A list of possible emotions is instantiated
-----------------	---

The documentation for this class was generated from the following file:

- `code.py`

5.10 `drama_filter::code::Environment` Class Reference

Represents the [Story Environment](#).

Public Member Functions

- `def __init__`
Constructor for [Environment](#).

Public Attributes

- `events`
- `objects`
- `agents`

5.10.1 Detailed Description

Represents the [Story Environment](#).

5.10.2 Constructor & Destructor Documentation

5.10.2.1 `def drama_filter::code::Environment::__init__(self, events = None, objects = None, agents = None)`

Constructor for [Environment](#).

Parameters

<code>events</code>	A list of Event
<code>objects</code>	A list of Objects
<code>agents</code>	A list of agents

The documentation for this class was generated from the following file:

- `code.py`

5.11 `drama_filter::code::Event` Class Reference

Abstract class that represents [Story](#) Events.

5.11.1 Detailed Description

Abstract class that represents [Story](#) Events.

The documentation for this class was generated from the following file:

- `code.py`

5.12 `drama_filter::code::Intention` Class Reference

Represents a [Intention](#).

Public Member Functions

- `def __init__`
Constructor for [Environment](#).

Public Attributes

- `label`
- `target`
- `intensity`

5.12.1 Detailed Description

Represents a [Intention](#).

5.12.2 Constructor & Destructor Documentation

5.12.2.1 `def drama_filter::code::Intention::__init__(self, label = None, target = None, intensity = None)`

Constructor for [Environment](#).

Parameters

<i>label</i>	A string of label
<i>target</i>	A string of target
<i>intensity</i>	A value for intensity

The documentation for this class was generated from the following file:

- `code.py`

5.13 `drama_filter::code::IntentionState` Class Reference

Represents a [Intention](#) State.

Public Member Functions

- `def __init__`
Constructor for [Environment](#).

Public Attributes

- `intentions`

5.13.1 Detailed Description

Represents a [Intention](#) State.

5.13.2 Constructor & Destructor Documentation

5.13.2.1 `def drama_filter::code::IntentionState::__init__(self, label = None, intensity = None)`

Constructor for [Environment](#).

Parameters

<code>intention</code>	A list of possible intention is instanciated
------------------------	--

The documentation for this class was generated from the following file:

- `code.py`

5.14 `drama_filter::code::Message` Class Reference

Represents the [Message](#).

Public Member Functions

- `def __init__`
Constructor for [Message](#).

Public Attributes

- `message_content`

5.14.1 Detailed Description

Represents the [Message](#).

5.14.2 Constructor & Destructor Documentation

5.14.2.1 `def drama_filter::code::Message::__init__(self, message_content = None)`

Constructor for [Message](#).

Parameters

<code>message_content</code>	A lits of message content
------------------------------	---------------------------

The documentation for this class was generated from the following file:

- `code.py`

5.15 drama_filter::code::Object Class Reference

Abstract class that represents [Story](#) Objects.

5.15.1 Detailed Description

Abstract class that represents [Story](#) Objects.

The documentation for this class was generated from the following file:

- `code.py`

5.16 drama_filter::code::Personality Class Reference

Represents the [Script](#).

Public Member Functions

- `def __init__`
Constructor for [Environment](#).

Public Attributes

- **desires**
- **actions**

5.16.1 Detailed Description

Represents the [Script](#).

5.16.2 Constructor & Destructor Documentation

5.16.2.1 `def drama_filter::code::Personality::__init__(self, name = None, actions = None)`

Constructor for [Environment](#).

Parameters

<i>desires</i>	A Desire State
<i>actions</i>	A list of Actions

The documentation for this class was generated from the following file:

- [code.py](#)

5.17 drama_filter::code::Plan Class Reference

Represents a [Plan](#).

Public Member Functions

- `def __init__`
Constructor for [Environment](#).

Public Attributes

- **actions**
- **acceptance**

5.17.1 Detailed Description

Represents a [Plan](#).

5.17.2 Constructor & Destructor Documentation

5.17.2.1 `def drama_filter::code::Plan::__init__(self, actions = None, acceptance = None)`

Constructor for [Environment](#).

Parameters

<i>actions</i>	A list of Actions
<i>acceptance</i>	A value for animator acceptance

The documentation for this class was generated from the following file:

- code.py

5.18 drama_filter::code::Script Class Reference

Represents the [Script](#).

Public Member Functions

- `def __init__`
Constructor for [Environment](#).

Public Attributes

- **environment**
- **interpretation**

5.18.1 Detailed Description

Represents the [Script](#).

5.18.2 Constructor & Destructor Documentation

5.18.2.1 `def drama_filter::code::Script::__init__(self, environment = None, interpretation = None)`

Constructor for [Environment](#).

Parameters

<i>environment</i>	A Story Environment
<i>interpretation</i>	A Script Interpretation

The documentation for this class was generated from the following file:

- code.py

5.19 drama_filter::code::Script_interpretation Class Reference

Represents the [Script](#) Interpretation.

Public Member Functions

- def [__init__](#)
Constructor for [Environment](#).

Public Attributes

- **message_content**
- **story_content**
- **character_description**

5.19.1 Detailed Description

Represents the [Script](#) Interpretation.

5.19.2 Constructor & Destructor Documentation

5.19.2.1 `def drama_filter::code::Script_interpretation::__init__(self, message_content = None, story_content = None, character_description = None)`

Constructor for [Environment](#).

Parameters

<i>message_content</i>	A list of Message content
<i>story_contents</i>	A list of Story content
<i>character_description</i>	nA list of Character content

The documentation for this class was generated from the following file:

- code.py

5.20 drama_filter::code::Story Class Reference

Represents the [Story](#).

Public Member Functions

- `def __init__`
Constructor for [Story](#).

Public Attributes

- `story_content`

5.20.1 Detailed Description

Represents the [Story](#).

5.20.2 Constructor & Destructor Documentation

5.20.2.1 `def drama_filter::code::Story::__init__(self, story_content=None)`

Constructor for [Story](#).

Parameters

<code>story_content</code>	A list of story content
----------------------------	-------------------------

The documentation for this class was generated from the following file:

- `code.py`
